

# Modeling, Data Processing and Remote Sensing in Atmospheric Sciences

Atmospheric sciences is an umbrella discipline comprising sub-fields such as meteorology, climatology, aeronomy, etc. Advances in science and technology have led to the expansion and advancement of this discipline. Some of the topics that have been covered include remote sensing of the atmosphere, measurement of wind, precipitation, etc. This book is an essential guide for both professionals and those who wish to pursue this discipline further. It attempts to assist those with a goal of delving deeper into the progress of atmospheric sciences.
