

Emerging Strategies in the Fight Against Meningitis: Molecular and Cellular Aspects

Meningitis is a significant and life threatening disease. This concise and informative book provides an important insight into the molecular and cellular approaches currently being used to counteract the disease. A panel of internationally recognised authors describe in depth the current research in this highly topical area. Topics covered include: The role of leptomeninges; interaction between bacteria and host cells; interactions with immune system; iron acquisition; potential vaccines; population studies. An essential book for everyone working in the area of meningitis research.
