

RNA Editing (Nucleic Acids and Molecular Biology)

Göringer's brilliant new work dedicates a chapter to each of the main types of RNA editing—the very first volume to do so. All of the sections here have been written by experts in the various research areas and a specific focus is put on the correlation between RNA structure and function, as well as on the complex cellular machineries that catalyze the different editing reactions. This leads to a state-of-the-art compendium of our current knowledge on RNA editing.
