

# Personality: Determinants, Dynamics, and Potentials

Personality: Determinants, Dynamics, and Potentials is a comprehensive survey of contemporary research and theory in personality psychology. The book provides balanced coverage of biological, cognitive, affective, social, and interpersonal determinants of personality functioning and individual differences. The authors organize these factors within an overarching theoretical framework that highlights the dynamic transactions between individuals and the sociocultural environment, and the human capacities for self-reflection and self-regulation. The book's broad, integrative approach to the study of personality reveals how advances throughout the psychological sciences illuminate the classic questions of personality psychology.
